

To Whom It May Concern:

Contract Pharmacal Corp. (CPC) uses the most advanced equipment to ensure the highest-quality Rx pharmaceuticals, over-the-counter drugs and dietary supplements for our customers worldwide. So when the time came to add a second stick pack machine to our state-of-the-art packaging facility, we turned to Viking Packaging Technologies.

The Viking stick pack machine produces high-quality, highly aesthetic stick packs – the single-dose packages of powder products. The Viking is a highly reliable machine. It is easy to operate and ensures robust construction of the stick packs, consistent weight control and efficient speed. As a result, CPC is better positioned than ever before to offer our customers stick packaging that showcases their brands while offering consumer convenience.

The Viking team had the knowledge and ability to provide us with a stick pack machine that fit our specific packaging needs, while offering us access to a very strong tech support staff to assist with our ongoing machine maintenance.

Bottom line: with the addition of the Viking stick pack machine, CPC has significantly expanded its production capacity to meet the growing demand for the stick pack, which is increasingly becoming a more popular dosage form for our customers all around the world.

Thank you to the entire team at Viking,

Matt Wolf
CEO

Contract Pharmacal Corp. (CPC)

Developer, manufacturer, packager of Rx pharmaceuticals, OTC drugs, dietary supplements
